Potter Pergo

Pergo Potter si distingue per il suo decoro lineare e la sua adattabilità a qualsiasi tipo di struttura, dalla pergola al gazebo. La fioriera avvolge o ingloba il palo di sostegno delle coperture. Possono essere forniti vari accessori idonei per il fissaggio al palo.

C

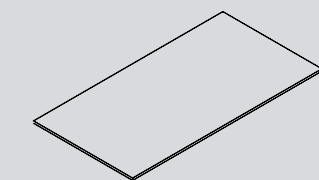

Il palo della pergola viene ancorato esternamente alla fioriera attraverso una piastra di base (A), o in alternativa tramite piastrino (B). L'utilizzo del piastrino consente di avere il palo distaccato dalla fioriera (C).

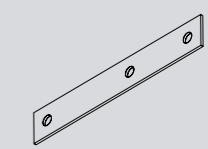

Nella versione cubica c'è la possibilità di inserire il palo anche internamente alla fioriera, fissandolo al centro (D) o ad uno dei quattro angoli interni della Potter (E).

Panco è la seduta in acciaio e grès ideata per le fioriere Potter quadrate o ad angolo. Di forma rettangolare, risulta molto solida e resistente e garantisce una base d'appoggio molto stabile. L'acciaio della seduta è personalizzabile con le stesse finiture delle fioriere a cui è fissata. La finitura delle lastre in grès è scelta in coordinato con il colore dell'acciaio.

Configurazione finale con due potter

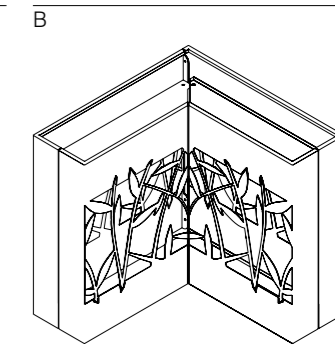

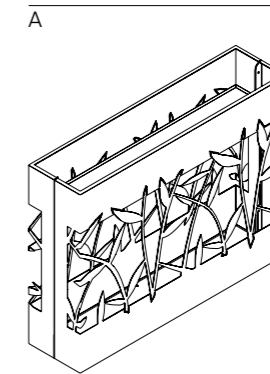

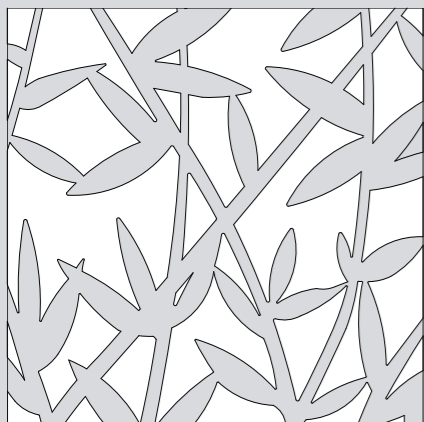

Slim

Slim è una fioriera separè a due livelli in acciaio o alluminio. La struttura, leggera e permeabile alla luce, è caratterizzata dal pattern grafico intagliato. Sono presenti due vasche per accogliere il verde, una alla sommità e una alla base. Grazie ai moduli rettangolari e angolari si possono realizzare composizioni perimetrali complete.
